### CRUSHING EQUIPMENT LIST

- - Jaw Crushing
- - JC Series Jaw Crushers
- - Impact Crushing
- - CS Cone Crushers
- - Hydraulic Cone Crushers
- - Spring Cone Crushers
- - HCS90 Cone Crushers
- - VSI Crushers
- - Jaw mobile crushing equipment
- - Impact mobile crushing equipment
- - Cone mobile crushing equipment
- - YGFS Multi-crushing equipment

### GRINDING EQUIPMENT LIST

- - MTW Trapezium Mill
- - LM Vertical Mill
- - MTM Trapezium Mill
- - High Pressure Suspension Mill
- - MXB Coarse Powder Mill
- - SCM Series Super Thin Mill
- - Raymond Mill
- - Ball Mill

## Jaw Crushing Equipment

**Jaw Crushing Overview :** Jaw crusher is one of the most widely used crushing equipment in industry. It features simple structure, easy maintenance, stable performance, even final particles and high crushing ratio. *Jaw Crushing Application:* Jaw crusher has been widely applied in [mining](#), metallurgical, construction, road and railway building, water conservancy and chemistry etc. It is mainly applied in the primary crushing in which the compressive strength of original material is under 320Mpa.

**Jaw Crushing Main Features and Benefits** 1. Simple structure and easy maintenance. 2. Stable performance and low operating cost. 3. High crushing ratio. 4. Use high manganese steel, one-off foundry. 5. High resistance to friction, abrasion and compression with longer operating life span.

crushingequipment.org

**Jaw Crushing Main Parts :** Jaw Crusher is made up of frame, flywheel, movable plate, fixed plate, toggle plate, set adjustment, main bearing etc. The toggle plate is used for protection.

**Operation and Maintenance of Jaw Crushing Overheating:** If for some reason the machine jams or stops running in the middle of processing, turn the circuit breaker for the machine "OFF" before doing any inspection. Once the circuit breaker is off, the thermal relay and motor relay will need to be reset. Press the red stop button for the machine and reset the relay for the motor (it is located on the motor). Wait a few minutes for the motor to cool. Before turning the breaker switch "ON" and restarting the machine, make sure the cause of the stoppage has been alleviated. NEVER work on the machine while the breaker switch is in the "ON" position. 5. When the [crushing](#) process is complete, remove the sample collection tray and transfer its contents to a clean container. 6. Prior to next use, clean the crusher and collection tray(s) as described previously. When done for the day, make sure the lab is cleaner than it was when you started, that the breaker to the crusher is turned off, lights are out, and door closed and locked.
