Mining Equipment : SCM Super Thin Mining Machine

[SCM Super Thin Mining Machine Overview] On the basis of more than 15 years' production experience of our company, we absorb grinding mill technology advantages from the same field abroad and domestic, organizing experienced processing experts to investigate, research, try again and again; finally, we develop this high-efficiency and low-noise Series Super Thin Grinding Mill.

[SCM Super Thin Mining Machine Application] SCM Series Super Thin Grinding Mill is mainly applied to the powder processing of mineral products in industries of metallurgy, construction, chemistry, Fertilizer and mining etc. The grinding mill can produce powder from non-flammable and non-explosive mineral materials with Mohs hardness below 9 and humidity below 8%, such as barite, limestone, quartz, calcite, granite, porcelain clay, basalt, gypsum etc.

[SCM Super Thin Mining Machine Main Features and Benefits]

1. High efficiency. Under the same condition of finished particle size and power of motor, the output of thin grinding mill is 40% higher than airflow grinding mill and whisk grinding mill.
2. Environmental protection. Pollution and noise are lightened by using deduster and muffler so as to reach the requirement of national environmental protection when using thin grinding mill.
3. High safety. No axle tree or bolt is used in the grinding chamber, so there will be no worn out problem of bearing and sealing parts, and also no loose of bolts in the running of thin grinding mill.
4. Finished size can reach to $d_{97} \leq 5\mu m$.
5. High using rate of spare parts.
